Telehealth

Telehealth Program Keeps Fremont Therapy Patients Connected and Healing

Fremont Therapy Group has expanded the way we deliver care by adding a secure, HIPAA compliant telehealth connection and some limited in-home appointments. Because we are committed to the health and continued progress of our patients amid the COVID-19 pandemic, we are taking every precaution necessary to ensure their safety.

Most health plans have expanded benefits in an effort to help providers continue to deliver care to their patients, and some are even going so far as to eliminate all or part of the patients' cost share. Regardless of our patients' coverage and especially in light of the current environment, FTG is committed to extending these new services to our patients regardless of patients' available coverage.

“This telehealth platform will allow us to continue the necessary physical therapy care for our patients. Real time conversation helps us assess and address concerns,” states founder Brent Kaufman.

What does telehealth PT look like?

You and your physical therapist will have a pre-arranged appointment time to carry out your treatment via online video conference. Your PT or OT will be able to demonstrate exercises and watch you repeat for accuracy. During this time you will be able to discuss how you are feeling and continue progress of your care and exercise programs.

Benefits of telehealth

- Patient privacy will be protected. HIPAA compliant, HI-TRUST platform.
- Allows patients to continue their care off site when appropriate or necessary
- Many patient insurances are covering telehealth, and those whose insurances are not will still have access to the service

Call any of our locations to learn if telehealth may be appropriate for you.
